

The Elonex Pulse Container

Our 7.65m Pulse unit is ideal for roadshows. Small enough to fit in most places and large enough to provide a comfortable customer experience (and accommodate a vehicle if required).

Our contemporary design deploys quickly with the push of a button. The unit can also be taken on roadshows with our fully electric HGV to create a genuine green roadshow solution.

This expanding container can be easily moved nationally or internationally using standard logistics equipment. The unit also expands to over 4.65m / 15ft and is 7.65m / 24ft long.

The unit lowers to ground level for easy access and is ready for use in just a few minutes. It is possible to integrate a car loading ramp in one end. See the container set-up above.
